SUMMARY

Results-oriented Backend Engineer with **4 years** of experience in building scalable systems using **C#, .NET 8, PostgreSQL, Redis, and Kafka**. Expert in designing production-grade APIs and background processing. Strong foundation in **Data Structures & Algorithms, System Design, and Distributed Systems**. Proven track record in leveraging **Azure DevOps** for CI/CD automation and system monitoring to deliver measurable improvements in latency, reliability, and deployment velocity.

TECHNICAL SKILLS

Languages / Frameworks: C# | .NET 8 | ADO.NET | Entity Framework | Java | ASP.NET Core

Databases / Storage: PostgreSQL | Kafka | Redis | SQL | Indexing | Stored Procedures

Systems / Patterns: RESTful APIs | JWT Auth | SSO | Microservices | Event-driven Design | Caching

Tools / DevOps: Azure DevOps (Pipelines, Boards, Repos) | Git | CI/CD (YAML) | Docker | Jira | Azure App Insights

PROFESSIONAL EXPERIENCE

Easyrewardz

Gurugram, India

Software Engineer

July 2024 – Present

- Designed and developed various **RESTful APIs** using **ASP.NET Core (C#)** following **microservices architecture**, powering real-time analytics and enterprise-grade **SSO** modules across multiple internal platforms.
- Built and maintained **end-to-end CI/CD pipelines in Azure DevOps** using **YAML-based workflows**, automating build, test, and deployment stages and reducing manual release effort by **35%**.
- Implemented a **distributed caching strategy using Redis**, reducing database load by **60%** and improving API response times by up to **3x** for high-throughput services.
- Integrated **Azure Monitor and Application Insights** to enable centralized logging, distributed tracing, and proactive alerting, resulting in a **30% reduction in MTTR** through faster root-cause analysis.
- Designed and optimized **PostgreSQL schemas, indexing, and query performance** to support **1,500+ active users**, implementing secure **JWT-based authentication and role-based authorization** using **ASP.NET Identity**.
- Architected and implemented a scalable **Single Sign-On (SSO)** solution from scratch using **OAuth 2.0 / OpenID Connect**, enabling centralized authentication across multiple microservices and internal applications.
- Orchestrated **asynchronous background processing and data synchronization pipelines** using **hosted services and message-based patterns (e.g., RabbitMQ)**, ensuring eventual consistency and eliminating manual cross-system synchronization.

Helm360

Noida, India

Technical Support Analyst / Developer

Jul 2022 – Jun 2024

- Built "HORB", a resource-tracking application for internal allocations; managed codebase versioning and task tracking via **Azure Boards**.
- Customized Elite 3E IDE Client, EDG, and Workflow modules, delivering client-specific integrations and financial reporting for global law firms (US/UK).
- Performed large-scale database migrations, schema updates, and query tuning to stabilize multi-tenant deployments and reduce support tickets by 25%.

SELECTED PROJECTS & IMPACT

- Cockpit & Console** — Centralized auth/SSO and analytics platform. Automated release cycles via **Azure Release Pipelines**, cutting developer onboarding time by **40%**.
- LogTicketing** — Leave/workflow APIs with 30+ stored procedures; utilized **Azure DevOps Repos** for branching strategies and peer code reviews, reducing critical query times by **40%**.

ACHIEVEMENTS & CERTIFICATIONS

- Formal appreciation from Product Managers for clean API design and reliable integration of brand-facing features.
- Certifications:** Fundamentals of .NET (Udemy), AI Tool Adoption & Prompt Engineering (DeepLearning.AI).

EDUCATION

Accurate Institute of Management and Technology, Greater Noida
B.Tech (Computer Science & Engineering), CGPA: 7.56

2019 – 2023
